WAI-0006

To Whom It May Concern:

During the construction of our new corporate office in Piketon, Ohio, Four Seasons Environmental, Inc. of Monroe, Ohio preformed all activities associated with the HVAC system commissioning for the building. Our office is the first new LEED construction project in Pike County Ohio. Four Seasons Environmental provided professional, knowledgeable, prompt, and courteous staff (especially Chris Rice) that interfaced with me, the general contractor, and architect to ensure items under their scope were completed, thus ensuring the end user (WAI) was fully satisfied. Even after the project was completed, they contacted us to make sure we were not only satisfied with their service but with the functionality of the building systems as well.

It was a pleasure to work with Four Seasons Environmental and I would recommend for similar work.

Sincerely,

A handwritten signature in cursive script that reads "Gene Collins".
